

Intalio enables Singapore with Cloud Computing Solution

New Intalio platform to support development of cloud computing in Singapore

Singapore's innovation diversity grows with establishment of Intalio R&D centre

Palo Alto, Calif. — 9 November, 2009 — Intalio, Inc., the Enterprise Cloud Company, today announced that it will develop a Governance Risk and Compliance (GRC) system and Partner Relationship Management (PRM) system for use in Singapore and other Southeastern Asian countries. Both solutions will be delivered as part of an Intalio|Cloud solution incorporating Infrastructure-as-a-Service (IaaS) and Platform-as-a-Service (PaaS) solutions from Intalio.

Intalio is also announcing that it is establishing an R&D center in Singapore to support its development efforts and to foster innovation in the region. Intalio sees Southeast Asia as a high growth market for IT solutions including cloud computing and Software-as-a-Service (SaaS) solutions. Intalio main customers in Southeast Asia includes several Fortune 100 Banks, Mitsui Knowledge Information, Mitsubishi Corporation and NTT Data

"Cloud computing hastens the pace of Infocomm Technology becoming the 4th utility, after electricity, gas and water, for businesses." said Andrew Khaw, Senior Director, Infocomm Development Authority of Singapore (IDA). "Cloud computing technologies offered by industry players such as Intalio will help to catalyse and accelerate business innovations on cloud computing. We see Singapore-based companies playing a keystone alliance role in bridging talent to trigger the growth of cloud computing in Asia."

Intalio has chosen Singapore as its R&D base because of its diverse talent pool, and also because its strategic location makes it a good launch pad to Southeast Asia. In addition it will be able to tap on Singapore's new nationwide broadband network capable of up to 1Gbps per end user connection to be fully rolled out by 2012. The cloud computing platform will further spur adoption of the fiber network through a range of applications for private and public sector computing needs and information management requirements.

"Intalio Pte Ltd has been established in February 2009 and it is already helping scores of Intalio customers in Southeast Asia," said Arnaud Blandin, Vice President and Managing Director of Intalio|APAC. "Southeast Asia proved to be a thriving market and we have great expectations for our private cloud offering. Having a local R&D team along with a support team means a lot for our Asian customers who expect excellent service in their geographic area."
